

## COMING SOON PAGE

# Design & Content Brief for the Frontend Intern

This document covers everything needed to build the OffsetX coming soon page — purpose, structure, copy, design system, and section-by-section guidance. Read it end to end before writing a single line of code.

## 01 · PURPOSE

## What this page needs to do

|                             |                                                                                                                                                           |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CAPTURE INTENT</b>       | Anyone who lands here is already warm. An email capture turns anonymous traffic into people we can follow up with.                                        |
| <b>SIGNAL CREDIBILITY</b>   | Investors, partners, and customers Google OffsetX after seeing LinkedIn posts or the PR article. They need to find something serious — not an empty page. |
| <b>STATE THE THESIS</b>     | One sentence of positioning so any visitor immediately understands what we're building and for whom.                                                      |
| <b>DEMONSTRATE MOMENTUM</b> | Primary research stats, interview insights, and published thinking prove this is real work, not a concept.                                                |

## 02 · DESIGN SYSTEM

## Palette, typography, and rules

## COLOUR PALETTE

|         |                   |                                           |
|---------|-------------------|-------------------------------------------|
| #080E0B | <b>Background</b> | Page background — the darkest layer       |
| #0A1410 | <b>Deep</b>       | Section backgrounds, nav                  |
| #0D1A14 | <b>Card</b>       | Card and panel backgrounds                |
| #1AFFE0 | <b>Teal</b>       | Primary accent — headlines, CTAs, borders |
| #0D7A5F | <b>Teal Dim</b>   | Secondary accent — dividers, badges       |
| #DFF2EA | <b>Off-white</b>  | Primary text — headings                   |
| #C8E6DA | <b>Muted</b>      | Body text                                 |
| #7AB8A0 | <b>Dim</b>        | Secondary text, labels, captions          |

## TYPOGRAPHY

|                           |                       |                                                                               |
|---------------------------|-----------------------|-------------------------------------------------------------------------------|
| <b>Display / headings</b> | Space Grotesk 700     | Used for H1, H2, H3. Letter-spacing: -1px to -1.5px on large sizes.           |
| <b>Body text</b>          | Space Grotesk 300–400 | All body copy. Line-height: 1.7. Colour: #C8E6DA.                             |
| <b>Monospace / labels</b> | Space Mono 400–700    | Eyebrow labels, counters, badges, nav links. All caps. Letter-spacing: 2–4px. |

DESIGN RULES

- No gradients. No illustrations. No stock photos. No green leaves.
- The grid IS the decoration — sparse horizontal rules encode section divisions.
- Every border uses `rgba(26,255,224,0.1)` — never full opacity teal on borders.
- Cards use #0D1A14 background with a 0.5px teal-dim border.
- Buttons: primary = solid teal (#1AFFE0), text black. Ghost = transparent, teal border.
- Border-radius: zero on all cards and panels. Sharp corners only.
- Max content width: 1080px. Horizontal padding: 32px desktop, 20px mobile.
- Sticky nav: 56px height, backdrop-filter blur(12px), background `rgba(8,14,11,0.92)`.

03 · PAGE STRUCTURE

Seven sections in this exact order

|    |                      |                                                                                  |
|----|----------------------|----------------------------------------------------------------------------------|
| 01 | Hero                 | First thing a visitor sees. Logo, headline, subheading, two CTAs.                |
| 02 | Founder Note         | A personal statement from Sahil. Comes second — right after the hero.            |
| 03 | Why Now              | Six market signals in a grid. About the market, not about OffsetX.               |
| 04 | Discovery Counter    | Four animated counters: interviews, stakeholder groups, geographies, hours.      |
| 05 | What We're Learning  | Five recurring themes from primary research. Each with a real quote.             |
| 06 | What We're Exploring | Five infrastructure areas being researched. Honest framing — not a product list. |
| 07 | Research             | Six article/insight titles. Links to LinkedIn for now. Archive coming soon.      |
| 08 | Follow Journey       | Email capture + LinkedIn link + contact. The conversion section.                 |

04 · SECTION-BY-SECTION CONTENT & GUIDANCE

Copy, notes, and implementation detail

SECTION 01 · HERO

Eyebrow label:

CARBON INTELLIGENCE INFRASTRUCTURE

Headline (H1):

Building the **trust layer** for compliance-grade carbon markets.

Subheading:

We are building the data and compliance infrastructure that helps organisations generate trusted, audit-ready carbon intelligence for the next generation of climate regulations.

CTAs:

Primary button: JOIN EARLY ACCESS → (links to #follow section)

Ghost button: TALK TO THE FOUNDER (mailto:hello@offsetx.ai)

Notes:

- Hero padding: 160px top, 100px bottom.
- "trust layer" in the headline should be teal (#1AFFE0), rest is off-white (#DFF2EA).
- H1 font-size: clamp(36px, 5.5vw, 72px) — scales fluidly across screen sizes.
- The left vertical accent bar (4px wide, teal, full page height) sits on the body left edge.

SECTION 02 · FOUNDER NOTE

Label:

A Note from the Founder

Quote:

*"Every week we speak with project developers, sustainability leaders, auditors, policy experts, and climate practitioners to understand where carbon markets are heading. OffsetX is being built from these conversations — not assumptions."*

— Sahil Khan, Founder · OffsetX

Notes:

- Left border on the blockquote: 2px solid teal.
- Font-size: clamp(18px, 2.2vw, 26px). Font-weight: 300.
- This section should feel quiet and personal, not designed-heavy.

SECTION 03 · WHY NOW

Headline: Climate markets are entering a new era of accountability.

|              |                                                                                                                                                 |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| REGULATION   | CBAM is reshaping global trade. Thousands of industrial companies now face mandatory embedded-emissions reporting with financial consequences.  |
| COMPLIANCE   | CCTS is introducing compliance carbon markets in India. Domestic carbon pricing infrastructure is being built right now.                        |
| ENTERPRISE   | Enterprises need audit-ready emissions data. Spreadsheets and consultant-driven workflows are no longer sufficient for regulatory scrutiny.     |
| VERIFICATION | Carbon projects require trusted Digital MRV. The industry is moving from periodic audits to continuous, satellite-enabled verification.         |
| DEMAND       | Buyers increasingly demand compliance-grade carbon assets. Quality, traceability, and auditability are now prerequisites — not differentiators. |

|                |                                                                                                                                                |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| INFRASTRUCTURE | No universal trust layer exists across carbon registries, markets, and geographies. The market is scaling without the infrastructure it needs. |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------|

Notes: Six items in a 2×3 grid on desktop, single column on mobile. Each has a small hover effect — left border animates from 0 to 100% height on hover.

SECTION 04 · DISCOVERY COUNTER

Four counters. These animate from 0 upward when the section scrolls into view.

|                   |                    |             |                   |
|-------------------|--------------------|-------------|-------------------|
| 20+               | 12+                | 4           | 30+               |
| Expert Interviews | Stakeholder Groups | Geographies | Hours of Research |

- Update the "20+" number to the actual interview count before deploying.
- Counter animation: use requestAnimationFrame, ease-out cubic, 1400ms duration.

SECTION 05 · WHAT WE'RE LEARNING

Context: We've spoken with carbon consultants, sustainability leaders, project developers, policy experts, and international climate practitioners across India, Europe, the Middle East, and North America.

|    |                                                                                                                                             |            |
|----|---------------------------------------------------------------------------------------------------------------------------------------------|------------|
| 01 | <b>Manual workflows remain widespread</b><br><i>"90% of this market is manual." — Carbon consultant</i>                                     | 4 mentions |
| 02 | <b>Trust in data is a bigger challenge than availability</b><br><i>"The biggest issue is trust in the underlying project."</i>              | 4 mentions |
| 03 | <b>Compliance markets expected to drive future demand</b><br><i>"Pure voluntary credits without compliance use cases have weak demand."</i> | 3 mentions |
| 04 | <b>Digital MRV is emerging as foundational infrastructure</b><br><i>"If you pick one with a large market size, it's dMRV."</i>              | 4 mentions |
| 05 | <b>Standardisation remains a major gap</b><br><i>"Six calculators would give six different numbers."</i>                                    | 3 mentions |

SECTION 06 · WHAT WE'RE EXPLORING

Framing note: Do NOT say "features" or "product". Say "We are currently researching infrastructure across:". This tells visitors we are disciplined, not indecisive.

|        |                                        |                                                                                    |
|--------|----------------------------------------|------------------------------------------------------------------------------------|
| [ 01 ] | <b>Compliance-grade emissions data</b> | Structured, audit-ready Scope 1, 2, and 3 data for EU ETS, CBAM, and CSRD.         |
| [ 02 ] | <b>Digital MRV</b>                     | Satellite, IoT, and AI-driven continuous measurement, reporting, and verification. |
| [ 03 ] | <b>Audit-ready reporting</b>           | Compliance-grade documentation structured to survive regulatory review.            |

|        |                                              |                                                                                       |
|--------|----------------------------------------------|---------------------------------------------------------------------------------------|
| [ 04 ] | <b>Carbon market intelligence</b>            | Structured data on credit supply, demand, registry activity, and compliance exposure. |
| [ 05 ] | <b>Trust and verification infrastructure</b> | UNIC — Universal Carbon Identifier — traceable across registries and geographies.     |

SECTION 07 · RESEARCH

Six article titles displayed in a 2×3 grid. These correspond to real LinkedIn posts already published. Link each to the corresponding LinkedIn post URL.

|                                                                                                              |                                                                                                         |
|--------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| <b>REGULATION</b><br>CBAM: What the Q1 2026 certificate price means for European industrial imports          | <b>MARKET</b><br>Why the VCM contracted — and what compliance demand means for recovery                 |
| <b>TECHNOLOGY</b><br>What Digital MRV can and cannot do: an honest assessment of satellite limits            | <b>INDIA</b><br>CCTS and the emergence of compliance carbon markets in India: a field perspective       |
| <b>INSIGHTS</b><br>20+ stakeholder interviews: recurring themes from consultants, registries, policy experts | <b>DMRV</b><br>Ground-truthing, canopy saturation, and why local calibration data still matters in 2026 |

SECTION 08 · FOLLOW OUR JOURNEY

Headline: Follow our research as we build.

Sub: We publish weekly — regulatory analysis, market observations, and honest reflections from building in public. No noise.

EMAIL FORM

- Input placeholder: your@email.com
- Button text: Stay Updated
- On submit: show success message: "You're in. If you work in carbon compliance, reach out at hello@offsetx.ai"
- Connect to: Mailchimp / Google Form / Notion — ask Sahil which before wiring it up.

THREE LINKS BELOW THE FORM

- Follow on LinkedIn (linkedin.com/in/iamsahilkhan)
- hello@offsetx.ai
- Request early access (mailto:hello@offsetx.ai?subject=Early Access)

05 · TECHNICAL NOTES

# Implementation guidance

|                      |                                                                                                                                                        |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>FONTS</b>         | Google Fonts: Space Grotesk (300, 400, 500, 600, 700) + Space Mono (400, 700). Load via a link tag in the HTML head.                                   |
| <b>SCROLL REVEAL</b> | Use IntersectionObserver on elements with class .reveal. Add class .visible when 8% threshold reached. Transition: opacity 0.6s + translateY 20px → 0. |

|                      |                                                                                                                                                         |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>COUNTER ANIM</b>  | requestAnimationFrame, ease-out cubic (1 - Math.pow(1-p, 3)), 1400ms. Observe the discovery section with IntersectionObserver.                          |
| <b>RESPONSIVE</b>    | Mobile breakpoint: 640px. Nav links hide on mobile. Email form stacks vertically. Theme badges hide on mobile.                                          |
| <b>BACKGROUND FX</b> | body::before pseudo-element with repeating-linear-gradient for the vertical grid lines. Opacity ~0.025 — very subtle.                                   |
| <b>NAV</b>           | position: fixed. backdrop-filter: blur(12px). background: rgba(8,14,11,0.92). 56px height. Smooth scroll on anchor links.                               |
| <b>EMAIL BACKEND</b> | The form currently shows a success state only — it does not capture emails yet. Ask Sahil which service to connect (Mailchimp / Notion / Google Forms). |
| <b>DEPLOYMENT</b>    | Single HTML file. Can be deployed to offsetx.io via Vercel, Netlify, or Cloudflare Pages. No backend required.                                          |

## 06 · WHAT NOT TO DO

### Hard constraints

- ✗ No gradients — anywhere.
- ✗ No green leaves, trees, wind turbines, or stock nature imagery.
- ✗ No AI, blockchain, or marketplace language in the hero.
- ✗ No launch countdown timer — we don't have a launch date.
- ✗ No feature list — we are not ready to commit to specific features.
- ✗ No bright blue or purple — palette is strictly dark green/teal.
- ✗ No border-radius on cards — sharp corners only.
- ✗ No animations that feel gimmicky — motion should be subtle and functional.
- ✗ Do not claim EU-specific findings for research conducted in India — attribution must be accurate.

## 07 · BEFORE YOU DEPLOY — CHECKLIST

### Things Sahil needs to confirm or provide

|                                     |                                                                                |
|-------------------------------------|--------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> | Confirm actual interview count (currently shown as 20+)                        |
| <input checked="" type="checkbox"/> | Confirm actual hours of research (currently shown as 30+)                      |
| <input checked="" type="checkbox"/> | Confirm email capture service (Mailchimp / Notion / Google Forms)              |
| <input checked="" type="checkbox"/> | Provide LinkedIn post URLs for the Research section links                      |
| <input checked="" type="checkbox"/> | Confirm domain: offsetx.io or offsetx.ai (currently hello@offsetx.ai in copy)  |
| <input checked="" type="checkbox"/> | Provide OffsetX logo file (transparent PNG) — see OffsetX_logo_transparent.png |

|   |                                                                        |
|---|------------------------------------------------------------------------|
| ■ | Review all interview quotes are correctly anonymised before publishing |
| ■ | Confirm stakeholder geography attribution is accurate in each section  |
